DETAILED ACTION

Drawings

The drawings are objected to because the copies submitted are not clear copies. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Objections

Claim 4 is objected to because "each of said apertures" lacks proper antecedent basis since only "an aperture" is recited. Appropriate correction is required.

Claim 6 is objected to because of the following informalities: "UTV" should be rewritten as --utility task vehicle--. Appropriate correction is required.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-6 are rejected under 35 U.S.C. 102(b) as being anticipated by Standfuss (3,410,008).

Standfuss discloses a hitch mounting assembly for a vehicle, including a hitch member (7, 3) adapted to be received by a receiver, and a locking mechanism (38). The phantom lines in Figure 3 show an arc-shaped free end.

The locking mechanisms include over-center latches (38).

Claims 1, 4 and 6 are rejected under 35 U.S.C. 102(b) as being anticipated by Cox (U.S. Patent 3,986,727)

Cox discloses a hitch mounting assembly including a frame supporting a working implement (12), a hitch member having an arc-shaped free end (Figure 4, for example) pivotable about a pivot axis. There is a locking mechanism (19).

The locking mechanism is a pin (19) inserted through an aperture.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 3671

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 7 is rejected under 35 U.S.C. 103(a) as being unpatentable over Standfuss or Cox, as applied above.

It is unclear what horsepower the vehicles have, since the inventions are directed elsewhere; however, it is standard practice to use the appropriately sized vehicle for a particular task. It would have been obvious to one of ordinary skill in the art at the time the invention was made to have used a 35 horsepower vehicle with either of Standfuss or Cox in order to best suit a small application. Note that a simple scaling down of either device would be capable of working with such a vehicle. Because no major design changes apart from this scaling down would have been necessary in order to make the devices work, this change is within ordinary skill.
